<b>Description</b> <a href="http://board.jdownloader.org/showthread.php?t=54386">http://board.jdownloader.org/showthread.php?t=54386</a> Well, a multi-hosts often contains more than one domain for a host in it's host list and/or also contains hosts which JD doesn't support. All of this is fine but the number of supported hosts which is then shown in JD when you click on the account symbol should match the number which maybe is shown in the account overview. I know that we're using the account status for this at the moment but it should be easy to change that to the number of hosts which is actually visible when you click on the account symbol.
