Description

This originally came from remi, but I am embellishing it based on various discussions.

- 1) remi is uncomfortable with the name Archive unite (see issue 1203). Download Unit may be more descriptive.
- 2) One of the available columns would be category and it could be altered either from the properties of a Package or Download Unit or directly in the Grid.
- 3) When a user clicks on the category column, a a drop-down entry box would appear allowing the user to select an existing category or enter a new category.
Sample categories to preload are: Adult, Audio, Games, Software, Sports, and Video.
- 4) A setting should be available to include the category in the directory path in which to save a file.
- 5) As with all columns, the user should be able to search and filter on the column.
