

JDownloader - Bug #2032

Restrict the characters allowed in file names and paths

07/08/2010 08:21 AM - drbits

Status:	Closed	Start date:	07/08/2010
Priority:	Low	Due date:	
Assignee:		% Done:	100%
Category:	GUI	Estimated time:	4.00 hours
Target version:	010 - Next Major Public Release 1.xxx		
Resolution:	Fixed		
Description			
Each OS has characters that may not occur in file names and paths or is restricted in its use.			
Users should be warned when they try to use what appears to be an illegal character sequence in a file name or path. Special exceptions such as Windows allowing \\ (two backslashes, not a quoted backslash) at the beginning of a path need not be excluded from the warning.			
In Windows, the following should cause a warning: [%! <>?*/,=] and any characters not representable as UNICODE. The linux regex could depend on the shell, but would probably be the same.
