

JDownloader - Feature #2116

HTTPS is not available on all sites that support it.

07/30/2010 09:04 AM - drbits

Status: Rejected	Start date: 07/30/2010
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: General	Estimated time: 8.00 hours
Target version: 040 - FarfarAway	
Resolution: Wont Fix	
Description For any site that supports HTTPS communication with the client, login should be through HTTPS (including Basic auth). The current setup for Rapidshare appears to be a Kludge. There is no support for all logins via HTTPS and the option is hidden. The option for HTTPS support for downloads should be moved to the Download settings page (not host settings).
