

JDownloader - Bug #2928

JD extraction add-on crashes when requesting the password.

01/30/2011 07:04 AM - drbits

Status:	Closed	Start date:	01/30/2011
Priority:	Normal	Due date:	
Assignee:	Botzi	% Done:	0%
Category:	Addon	Estimated time:	0.00 hour
Target version:	010 - Next Major Public Release 1.xxx		
Resolution:	Can't reproduce		

Description

From the emergency log, it looks like Java is having trouble displaying the dialogue box. Usually this means that either it provides a bad reference for the StringBuffer to read into, it provides a bad string to display (such as Null), or the parent_hwnd is a handle to something other than the main window (or Null, for the desktop).
