Resolution:	Fixed		

Description

Determining duplicate files using the crc hash value, provided by some filehoster to prevent downloads of the same file, even if there's a different filename.

raztoki made a suggestion in forum:

[20:17] <raztoki> make it optional in advanced..

[20:18] <raztoki> on advanced user setting, allow checksum to determine deduplication of mirrors

[20:18] <raztoki> disable all other mirrors, use first download to determine filename

[20:19] <raztoki> and or prompt within linkgrabber on adding links to download tab, on common hashes to a single filename

[20:19] <raztoki> something like they do with archive files missing

[20:19] <raztoki> sound like a reasonable solution ?
