<b>Category:</b> GUI	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b> 020 - Next Release 2.0	
<b>Resolution:</b>	
<b>Description</b> separate comment field into two fields 1st) one from plugin sets 2nd) from user derived comments (add links dialog, packagise customiser, folder watch, api, etc)  When plugins first add links, display comment 1) when 2).isEmpty When user edits comment show 2) and ignore 1) if plugin updates 1).. it's ignored.  this way plugin rechecking of online status wont nuke users inputs. I had a complaint about this for k2sapi as it sets comment each time. The only solution I could come up with is if DownloadLink.getComment() != null.. but the problem with that is we can not differentiate between previous plugin set comment and user set comment. Effectively can't update.  either that or make two seperate fields and gui rows userComment/pluginComment.
