Category: GUI	Estimated time: 0.00 hour
Target version: 030 - Version > 2.xxx	
Resolution:	
Description Sometimes the users have a lot of hosters (in my case, sometimes I have 100 or more), for example (see screenshot SideBar01), and when we do click in the button 'Hoster', JD2 hides all hosters (screenshot SideBar02). My request is, when we do click in the button 'Hoster', JD2 shows the hosters but disable those hosters for example the screenshot SideBar03, Thus, the users will be in the ability to select one or more hosters (screenshot SideBar03), in order to do their downloads. Otherwise, we have to disable one by one, and then leave only selected hosters who want to download, and create a rule for each hoster take much time. Moreover, in this way, we not lost the package order, and the name of the packages, like when we use RightClick > others > split packages by hoster.
