Description			
Exact post: http://board.jdownloader.org/showpost.php?p=272544&postcount=5			
Thread: http://board.jdownloader.org/showthread.php?t=51971			
NOW:			
Reconnect check routine:			
-Is auto reconnect enabled?			
-Am I allowed to reconnect only for resumable or also for non resumable downloads?			
Imagine you have 2 JDownloaders, running in the same network, both got the same external network IP. JD_a wants to reconnect -> Check if it's allowed to -> Reconnects -> Kills downloads of JD_b			
IDEA:			
Imagine you have 2 JDownloaders, running in the same network, both have the same my.jdownloader account configured and got the same external network IP.			
Reconnect check routine:			
-Is auto reconnect enabled?			
-Am I allowed to reconnect only for resumable or also for non resumable downloads?			
-NEW: Am I allowed to reconnect -> Ask my.jdownloader API			
1. JD_a requests a reconnect (reconnect routine first).			
2. Myjd checks if other running JDs are active and asks if a reconnect is ok.			
3.a -> Reconnect allowed -> Reconnect, also interrupt the downloads of JD_b and start them again once the connection is back.			
3.b -> Reconnect not allowed -> Wait till the next try			
That's how I imagine it and I think it's a great idea of this user!			
What do you guys think?
