#### Description

I need some help with adding support for photo albums for groups

(<http://board.jdownloader.org/showthread.php?p=280621>)

For photo albums connected to the user profile, decrypter uses some kind of ajax calls (br.getPage(link + "/album/" + galleryID + "/ajax/0/" + i \* 16 + "?t=" + basicAuth)) to get list of photos' ids available for each subpage.

I can't figure out how to get similar list/structure for groups' albums.

Account data: <http://jdownloader.org/pastebin/118894>

I've already started to write changes for supporting new type of links and group galleries (see attachment) but stucked with the problem above.

.bismarck please help! :)
