#### Description

I wanted to report a minor bug:

When we drag and drop a link to jdownloader (from browser), jdownloader linkgrabber takes control, its window comes forward (over browser window) but it does not gain focus. Even though jdownloader window is now upfront, focus stays on browser window. (Browser window's title is blue, jdownloader window's title is grey).

So after we click "Start all downloads", we require taking browser window to front manually. In that scenario jdownloader is now over browser window but since it didn't take the focus and Windows OS still think browser window is in focus and does not automatically move browser upfront when we click on it (unless you click its header).

I drag and drop from firefox to JD directly. I think its all about speed. If you do this (drag, drop, wait a second, click Start All downloads button) SLOWLY, it works fine. But if you do it fast (drag, drop, click start all downloads button immediately), JD window goes front but does NOT gain focus, Firefox keeps focus.

I created a video for this so that I can demonstrate it to you. In this video, I dragged and dropped 3 times. First 2 times worked fine because "start all downloads" button is not clicked very fast. But in the third attempt, I clicked it fast and you can see JD window comes forward but firefox keeps focus.
