Target version: 020 - Next Release 2.0	
Resolution:	
Description http://board.jdownloader.org/showthread.php?t=57660 Ok this is the situation: -Multiple packages -Subfolder via packagename enabled -All links have unknown filesize -Target path (disk) is full or not enough space available Problems: 1. JD will relatively slowly go through all links instead of stopping completely - the disk is full and this will not change. I know it may happen that there are some links with known filesize that still fit on the drive but still, I think a direct stop of all dls would make more sense. 2. JD will create all subfolders of each package but will not download a single file --> Chaos for the user.
