Target version:	020 - Next Release 2.0		
Resolution:	Fixed		

Description

I've had this idea for some time now, and I think it would be worth while at least as a additional context menu 'Copy URL + Filename' or an advanced option to enable/disable on the existing menu. Not all plugins catch or store links past the UID, so when users copy numerous links its hard to determine what is what.

to provide import link + stored link filename.
to be tabbed or space delimited.

that way you can at least know what the link represents once you leave JD GUI

the end.
