<b>Target version:</b> 020 - Next Release 2.0	
<b>Resolution:</b>	
<b>Description</b> Many hosters block proxies, I'm seeing loads and loads of subnets blocked due to this. We need a more effective way to deal with this situation. Using error fatal is all and good, but if we have more direct error exception we can handle better!	
<b>DownloadLink</b> When using default connection 'noproxy', we should assume that reconnection can not avoid restriction, covers 'datacenter/colo/vpn/vps provider/(isp) ip subnet'  When connection is from proxy, discontinue given proxy entry from use (add to session blacklist?). Effectively prevent retry with given connection type.	
<b>Account</b> Also it would also be good applying to account level, for instance when someone adds account from 'datacenter/colo/vpn/vps provider/(isp) ip subnet', if we throw that exception it will mean disable account and throw generic message indicating your IP has been banned!
