Description			
<p>Hey guys I just had an idea I wanted to share with you: How about a field which you can just throw in your extract password(s). This would be much quicker, easier and more innovative than assigning extract passwords to specific links/packages and would speed up the workflow. All passwords thrown into this field could simply be added on top of the password list so once the downloads are done, JD will find the correct password in no time.</p> <p>The field should, of course be removable via advanced interface settings and should be either in the upper toolbar or bottom by default or selectable via custom menus.</p> <p>What do you guys think?</p>
