

JDownloader - Feature #62570

Update/Build: Change how we release into public JDownloader 2.0 BETA

01/28/2015 04:30 AM - raztoki

Status:	New	Start date:	01/28/2015
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	General	Estimated time:	0.00 hour
Target version:	020 - Next Release 2.0		
Resolution:			

Description

I recommend that we create multiple tags/releases of JDownloader 2.0, so that when you have a specific user with an issue you can push updates into release that doesn't have many users. We actually never announce this release/branch to end users. The files are only kept on one update server, so that we don't waste harddrive space and traffic.

Have an advanced setting (or maybe hidden setting via cli), in which defines 'public beta' or 'public svn' or something along those lines. It needs a way to also revert this when we are satisfied, our fix is good, to change user settings back standard release, without losing current updates.

'build > full public' pushes to everyone, 'build > full svn' pushes to that release only. This way end users do not receive 100s of update notification in the name of development testing. It will eliminate countless enquiries about so many updates ref:

For example, yesterday 5 core build fulls in ~1hour,

```
28781      01/27/2015 07:30 PM  coalado
build>full
28780      01/27/2015 07:17 PM  coalado
build>full
28779      01/27/2015 06:37 PM  coalado
build>full
28778      01/27/2015 06:35 PM  coalado
build>full
28777      01/27/2015 06:28 PM  coalado
build>full
```

and then

```
28792      01/28/2015 01:23 AM  coalado
build>full
28791      01/28/2015 01:08 AM  coalado
build>full
28790      01/28/2015 12:52 AM  coalado
build>full
```

end of the day, push a single build full!
