#### Description

10.02.15 18.44.17to10.02.15 18.43.56 jdlog://3295437732241/

Seems like when I yesterday shut down my PC, JDownloader was just extracting.

Anyways - when I started it again today I got a message "blabla jd wqas shut down during extraction".

The package was completely downloaded and still had the "extracting" status although JD didn't do anything.

Well then I right-clicked on it --> Extract now

JD "extracted" the data and deleted the archives afterwards - as wished.

Only problem: The extracted video file was only 2,X GB in size so about 8 GB were missing but JD still deleted the archives.

Note sure if this is easy to reproduce!
