

JDownloader - Feature #64596

Idea: Change general downloadpath --> Change for all current links/packages for which the user actually used the corrent downloadpath

Description I really can't say if this is a good idea but it just came into my mind: A lot of users found it strange that a change of the standard-downloadpath did not change it live while we always said that this would make no sense. Now my idea: If the user changes the standard path, apply to new path to all packages with the old standard downloadpath (maybe also keep subfolder-setting in mind!). This way, special downloadpaths for specified packages would be preserved while the downloadpath would be correctly changed to the new path for most of the packages. What do you guys think?
