Target version: 020 - Next Release 2.0	
Resolution:	
Description https://board.jdownloader.org/showthread.php?t=71088 See function checkDirectLink in a lot of plugins. Use general function instead of this. Check if it is possible/makes sense to generally try to re-use old urls - keep in mind that this is usually not possible for POST requests prior downloadstart. Fine tuning: Maybe add a boolean function isIpBound so that the function knows whether it should actually check an url - e.g. after a reconnect, for a lot of hosters the directlinks will no be re-usable! Also consider that there are different directurls for the following accounts/szenarios. -Multihoster -Non-Account download -Free Account download -Premium account download	
Related issues: Duplicated by Feature # 86729: Plugins: generic checkDirectDownload method Assigned 03/01/2019
