Description

In some cases, the FileChooser Dialog shows the wrong information in the wrong column. This bug seems to be related to the "FileChooser.useShellFolder" property. This bug cannot reproduced always. It depends on the preselected file/folder. If there is no preselection, it may occur after changing the folder using the combobox

Class to look at: org.appwork.utils.swing.dialog.ExtFileChooserDialog

Title_2013-06-06_10-02-47.png

Maybe it would be a good idea to write a proper filechooser component from scratch some day.
